

## Specialist Skill Packages

### **SkillCheck Professional Metered Testing**

This product is similar to the "Value Pack" in that it has a defined number of testing sessions available, however it is only for a pre-defined set of tests rather than the full list of tests shown in the "Master Pack".

It's the ideal solution for those requiring only a few tests on a select list of applications and where, once the tests are used, no more need may exist.

Where the anticipated number of tests increases, the "meter" can easily be recharged and the testing facility continued to be used.

Flexibility, economy, ease of use, SkillCheck validity and reliability – perfect for those special projects that do occur from time to time.

A DVD drive is required for software installation. Where audio files are included in the installation, a sound card and speakers/ headphones are also required.
