

## SkillCheck TestMaking Utilities

SkillCheck has a variety of test making utilities delivering skill-testing technology that gives users the competitive edge.

### SkillCheck TestMaking – What Is It?

#### SkillCheck Professional Plus & ItemWriter

With SkillCheck's advanced test customization capability, a test administrator can create tests that combine questions from any SkillCheck test item database into a single test. For example:

- A test administrator can select test items from SkillCheck's database of over 200 test items on Microsoft Word to create one or more Word tests that exactly match a training, education or screening program for a particular job or course.
- Combine questions from SkillCheck's Word, Excel, PowerPoint and Access test databases of interactive test items to create a Microsoft Office test that quickly assesses a candidate on several applications at once.
- Administrators can also use SkillCheck *ItemWriter* to create new linear test items (multiple choice, multiple response, true-false, fill-in-the-blank, and matching) that can be combined with any SkillCheck interactive or linear test item, allowing limitless ability to create the perfect test to match a screening or training program.

#### Additional Test-Making Tools

SkillCheck also offers a wide range of other advanced test-making tools, including:

##### The SkillCheck TestMaker

The SkillCheck *TestMaker* gives you the capability to create your own tests on any subject, using any number of multiple-choice, true-false, and fill-in-the-blank questions. Questions and answers can be of any length, and questions can include text and graphics.

##### Typing TestMaker

In addition to providing standard typing speed and accuracy tests, the SkillCheck *Typing Test* package also allows you to create your own typing tests based on your own documents.

##### Data Entry TestMaker

In addition to providing standard alphanumeric and numeric data-entry tests, SkillCheck's *Data Entry* test package also allows you to create your own data-entry tests based on your own forms and data.
