

TechTip #21 - Taskbar Auto hide (PC-based Testing)

Why do I get a message telling me that my "Auto Hide" feature is turned on after I launch SkillCheck?

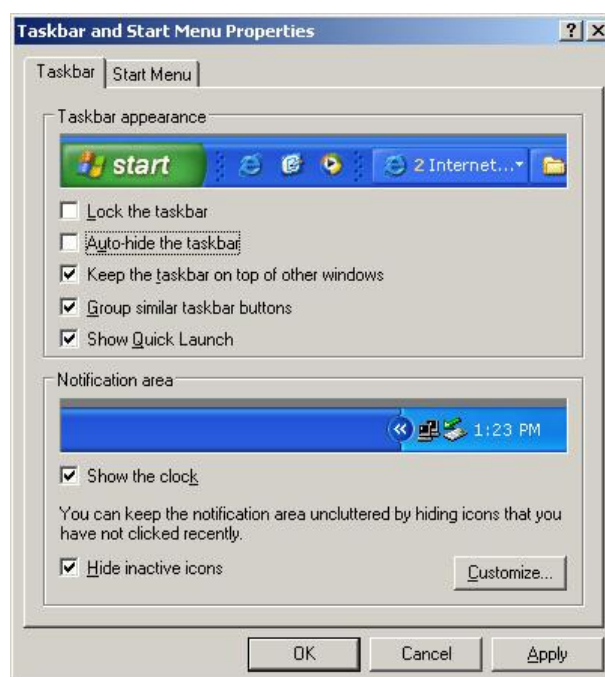

SkillCheck TestCenter has built in security that disables test takers from accessing the Windows Desktop during a testing session. The Windows Taskbar Auto Hide feature can interfere with this security and must be disabled for the SkillCheck security to be enabled.

How do I disable the Windows Taskbar Auto Hide feature?

To auto hide the taskbar, follow these directions:

1. Right-click any blank portion of your taskbar.
2. Click on Properties from the menu.
3. The Taskbar Properties box will appear. On the Taskbar Options tab, uncheck the "Auto hide" box.
4. Hit the Apply button at the bottom right.
5. Click on OK.

The SkillCheck TestCenter Security will now be enabled.
